**Schunk  
Systems**

## Your competition advantages being a Schunk partner

As a partner of Schunk you enjoy many product benefits as well as a complete customer service.

- By our fast on-site service we are reachable for you anytime – around the clock.
- Due to our highly professional expertise and long time experience you will get a large variety of best quality products.
- We guarantee you a competitive price for each product.
- We place the highest demands on ourselves. Our specialists are at your disposal as competent partners.
- Our customers trust in our products. In our own laboratory facilities and test benches each product is checked precisely, as we attach utmost importance to safety.
- Ideal customer care and fast service – these are the words Schunk identifies itself with. Give us a try and you will get to know and appreciate us as a competent partner.

Concerning all projects with regard to systems a request to Schunk Bahn- und Industrietechnik GmbH is worthwhile in any case.

Challenge us. You will be surprised about how many benefits there are for you around the product. You will find our contact address on the back of this brochure.

## Perfect consultancy by our Business Support Centre

We are glad to advise our customers in our Business Support Centre concerning the following subjects: Material selection, efficiency of manufacturing process, environmental influences and surrounding conditions.

We attach great importance to innovations. With our own prototype building in connection with the inhouse tool and jig construction special product concepts can be realised in a direct and timely manner.

Our on-site service – having a short reaction time – is at your disposal around the clock.

## Development, production and installation

*CAD/CAM/PLM developments can be given to our central manufacturing plant from different construction locations.*

*The system audits take place in Schunk's own test and laboratory facilities, as e. g. electricity and rpm test benches for earthing contacts and slip ring units.*

*System installations take place using the latest manufacturing processes like KANBAN, among others.*
